

What's new in Catalogic DPX[®] 4.12

This document summarizes the key new features in **Catalogic DPX version 4.12**. To learn more about how **Catalogic DPX 4.12** can meet your data protection needs or to schedule a demo, please visit <https://www.catalogicsoftware.com/> or [contact us](#) today.

New Features in DPX 4.12

DataCore Swarm Data Protection using S3 - This version introduces a new data protection feature for DataCore Swarm storage using S3 protocol, enabling full and incremental backups and ensuring comprehensive data security and efficient recovery.

Full Backup

Support for full backups of S3 storage to enhance data protection and recovery capabilities.

Full Restore

Performing full restores of S3 data, allowing for full-bucket data recovery in case of data loss or corruption.

Incremental Backup

Added incremental backup functionality for efficient protection of S3 data.

Retention Management

Retention policies and management options to help you control the lifecycle of your data.

New Features in vStor 4.12

Enhanced Encryption Keystore

- **Improved Encryption Secrets Management:** This release introduces an upgraded encryption keystore, providing enhanced management for encryption secrets.

Standard User Access for DPX Operations

- **Standard User for DPX Operations:** Now supports using Standard User accounts to perform DPX backup and restore operations, enabling greater flexibility and adherence to role-based access control.

GuardMode Integration Enhancements

- **Scan Persistence:** Enables users to review the history of GuardMode scans for volume snapshots, offering a comprehensive view of past scan results.
- **Auto-Run for Scans:** Introduces an option to automatically initiate a GuardMode scan on any new snapshot, streamlining the security process.
- **Scan Cancellation:** Provides the ability to cancel ongoing scans, allowing for greater control over scan operations.
